Education

Mahatma Gandhi MGM's College of Engineering and Technology — Noida, U.P
Bachelor in Technology in Computer Science & Engineering — *Nov. 2021 – June 2025*

Experience

Research Associate - AI — Gurugram, Haryana
Keywords Studios — *August 2025 – August 2026*

- Executed 120+ RLHF/HITL evaluation cycles daily (500–600 weekly) on an enterprise foundation LLM using zero-shot, few-shot (3–4 exemplars), and JSON-schema-based structured prompting, consistently exceeding baseline productivity targets while maintaining evaluation quality and reasoning consistency.
- Monitored execution graphs of 2–10 concurrent agents across 100–500+ weekly workflow runs, using state tracking, observation-action loop monitoring, and agent-to-agent communication audits to isolate coordination failures.
- Benchmarked model reasoning and JSON-schema-based tool-call behavior, validating structured outputs, identifying malformed responses and tool-execution failures, and contributing to improved interpretability, response consistency, and more efficient agentic workflows.
- Evaluated ETL-style ingestion spanning web extraction, chunk/token transformation, and vector-store loading for an approximately 10M-token context window, validated throughput, persistent cross-session memory, and explicit context-reset overrides.
- Evaluated outputs for harmful, self-harm-related, sexual, and discriminatory content, strengthening safety guardrail coverage and policy compliance across production-bound agentic workflows.
- Authored behavior-analysis reports and reasoning-pattern taxonomies, served as primary India-US liaison for a 5-person research pod across India, Poland, and the US, ranked top-5 for 3 consecutive months and #1 in March 2026.
- Contributed to RLHF-based behavioral alignment for Mecka AI's humanoid-robotics platform during a 2-month engagement, evaluating chained input-output-review workflows across sequential models for industrial-automation and human-companion robot classes.

Projects

AdaptiveRAG | *Python, FastAPI, Mistral AI, Qdrant, Redis* — *2025*

- Built an adaptive Retrieval-Augmented Generation (RAG) application using Python and FastAPI to classify user queries and dynamically route them through appropriate retrieval and response workflows.
- Integrated Mistral AI embeddings with Qdrant vector search to retrieve relevant context from indexed documents and generate context-aware responses using large language models.
- Implemented Redis-based semantic caching, asynchronous FastAPI endpoints, and Server-Sent Events (SSE) streaming to reduce redundant LLM requests and improve response delivery.

FunnX.Ai | *Python, Flask, Streamlit, Google Gemini API, OpenRouter* — *2024 – 2025*

- Engineered a full-stack multi-LLM chat platform with a Flask REST API backend and Streamlit frontend, unifying Google Gemini and DeepSeek within a single workspace.
- Implemented parallel dual-inference "Try Both" mode, dispatching one prompt concurrently through Google Generative AI API and OpenRouter for real-time comparison of reasoning depth, response quality, and speed.
- Built session-aware conversation management preserving context during model switching and a dedicated "Research Mode" prompt configuration for analytical queries, deployed on Render.com with Gunicorn.

Technical Skills

Languages & Backend: Python, FastAPI, Flask, Pydantic, Streamlit, REST APIs, JSON, SSE Streaming
AI & GenAI: LangChain, LangGraph, OpenAI API, Gemini API, Claude API, Groq, OpenRouter, Mistral AI, Prompt Engineering, Embeddings, RAG Pipelines, Agentic AI, AI Agents, Tool Calling, Multi-Agent Systems, RLHF, HITL, MCP
Databases & Caching: PostgreSQL, Redis, FAISS, Pinecone, Qdrant, ChromaDB, Semantic Caching
Developer Tools: Docker, Git, Agile
Data & Core Concepts: NumPy, Pandas, DSA, System Design, LLM Architecture, Transformers, AI Safety & Governance

Certifications

Full Stack Generative and Agentic AI with Python — *Udemy*
Supervised Machine Learning: Regression and Classification — *Coursera*
FastAPI with GenAI and AgenticAI project - From Basic to AI — *Udemy*
Python Programming Bootcamp — *Udemy*
