Technical Skills

Languages & Backend: Python, FastAPI, Pydantic, Streamlit, REST APIs, JSON, SSE Streaming, Object-Oriented Programming (OOP)

AI & GenAI: LLM, GenAI, LangChain, LangGraph, OpenAI API, Gemini API, Claude API, Groq, OpenRouter, Mistral AI, FinBERT, MiniLM, Prompt Engineering, Embeddings, RAG Pipelines, Hybrid RAG, Agentic AI, AI Agents, Tool Calling, LLM Failover Routing, Multi-Agent Systems, RLHF, HITL, MCP

Databases & Caching: PostgreSQL, Redis, FAISS, Pinecone, Qdrant, ChromaDB, Semantic Caching

Developer Tools: Docker, Git, Agile

Data & Core Concepts: NumPy, Pandas, SciPy, PyPDF, ETL Pipelines, Quantitative Modeling (Black-Scholes, DCF), DSA, System Design, LLM Architecture, Transformers, AI Safety & Governance

Experience

Research Associate - AI — Gurugram, Haryana

Keywords Studios — *August 2025 – August 2026*

- Engineered 6,000+ RLHF/HITL evaluation workflows on Amazon Nova (AWS) using zero-shot, few-shot, and JSON-schema prompting, achieving 90%+ evaluation accuracy and <10% inter-annotator disagreement.
- Monitored Amazon Nova multi-agent execution graphs (2–10 concurrent agents) across 500+ weekly runs via state tracking and JSON tool-call validation, curating 5,000+ fine-tuning records to isolate coordination failures.
- Benchmarked chain-of-thought (CoT) reasoning and token-efficient JSON tool-call schemas on Amazon Nova, improving output interpretability by 30% and reducing inference latency by 40% while preventing malformed responses.
- Validated Python ETL and RAG pipelines (chunking, embeddings, vector retrieval) across a 10M-token context window for Amazon Nova workflows, testing cross-session memory to reach 95% accuracy and <5% hallucination rates.
- Enforced AI safety guardrails on Amazon Nova outputs; served as primary India-US liaison for a 5-person pod collaborating across 15+ GenAI, NLP, and multimodal teams (ranked #1 performer in March 2026).
- Executed RLHF behavioral alignment for Mecka AI's humanoid-robotics platform, validating chained multi-model inference workflows across industrial-automation and human-companion robot classes.

Projects

Fintech Intelligence | *Python, FastAPI, Next.js 14, SQLAlchemy, SciPy, Multi-LLM, RAG* — *2025 – 2026*

- Architected a full-stack Indian market intelligence platform using Python and FastAPI (100+ REST endpoints), with a 16-stage ETL pipeline indexing 2,400+ NSE/BSE equities, mutual funds, ETFs, IPOs, and corporate actions.
- Built a 4-workspace AI Quant Hub via a 3-tier LLM router (Gemini, Groq, OpenRouter): RangeCast price bands, 4 PM Market X-Ray, StreetPulse FinBERT sentiment, and Ask Dalal AI (MiniLM hybrid RAG and research notes).
- Implemented fault-tolerant LLM circuit breakers with automated fallback synthesis, CEO Say-vs-Do guidance tracking, and sequential quarterly filing semantic diffs across 1,500+ indexed annual report and DRHP chunks.
- Engineered a Python quantitative engine (SciPy) computing Black-Scholes Option Greeks, Probability of Profit (POP), Option P&L and Theta-decay replay, Reverse-DCF, XIRR, and Piotroski, Altman, and Beneish forensic scores.
- Developed an F&O derivatives workspace, GIFT Nifty and US-ADR opening gap engine, CAMS/CAS PDF Portfolio X-Ray, a Rs. 10L virtual trading sandbox, and a statutory Net-in-Pocket tax and brokerage calculator.

FunnX.Ai | *Python, Flask, Streamlit, Google Gemini API, OpenRouter* — *2024 – 2025*

- Engineered a full-stack multi-LLM chat platform with a Flask REST API backend and Streamlit frontend, unifying Google Gemini and DeepSeek within a single workspace.
- Implemented parallel dual-inference "Try Both" mode, dispatching one prompt concurrently through Google Generative AI API and OpenRouter for real-time comparison of reasoning depth, response quality, and speed.
- Built session-aware conversation management preserving context during model switching and a dedicated "Research Mode" prompt configuration for analytical queries, deployed on Render.com with Gunicorn.

Education

Mahatma Gandhi MGM's College of Engineering and Technology — Noida, U.P

Bachelor in Technology in Computer Science & Engineering — *Nov. 2021 – June 2025*

Certifications

Full Stack Generative and Agentic AI with Python — *Udemy*

FastAPI with GenAI and AgenticAI project - From Basic to AI — *Udemy*
